NIFA

USDA Science

- **Several agencies**

- NIFA is the extramural funding agency
- Intramural research-
Agricultural Research Service, Economic Research Service, Forest Service

- **Budget**

- ~ \$3.8 B Research/Education Investments
- ~ \$2 B in extramural support and the rest in intramural support

- **NIFA's science functions**

- Research
- Education
- Extension- formal nationwide outreach system

NIFA

NIFA in Numbers

\$1.95 Billion Budget (FY21)

~74+ programs (budget lines)

Different budget lines, each with its own scope and mandates

Formula vs competitive vs capacity vs directed

>2300 Annual Awards

>300 NIFA staff currently on board

+ ~60 in Admn and Financial Mgt Unit of REE (AFM)

Holistic View of Agricultural Systems

- **Productive**
 - 40% increase in production
 - Produce what we need
- **Profitable**
- **Environmentally Sustainable**
 - 50% reduction in footprint
- **Resilient and Robust**
 - To disruptions

NIFA

- » Made from plant proteins
- » Raised \$180 million from Bill Gates, Google Ventures, Open Philanthropy Project, amongst others
- » Burger uses about 75% less water, generates about 87% fewer greenhouse gasses, and requires around 95% less land than conventional ground beef from cows.
- » On menu in many high-end restaurants, Air New Zealand and now in Burger King and grocery shelves!

Vertical Farming

NIFA

- NIFA Urban Agriculture Program
- \$10 million in FY2018 Farm Bill

An aerial photograph of a large-scale hydroponic farm. A prominent blue overhead structure, labeled 'LemnaTec', spans across a long, narrow bed of green plants. The plants are arranged in neat rows within a field. In the background, there are several large, white, rectangular structures, likely greenhouses or storage units, and a clear blue sky. The overall scene depicts a modern, technologically advanced agricultural facility.

2015 NIFA

Data Investments By NIFA

DATA-RELATED RESEARCH AT NIFA 2005-2008

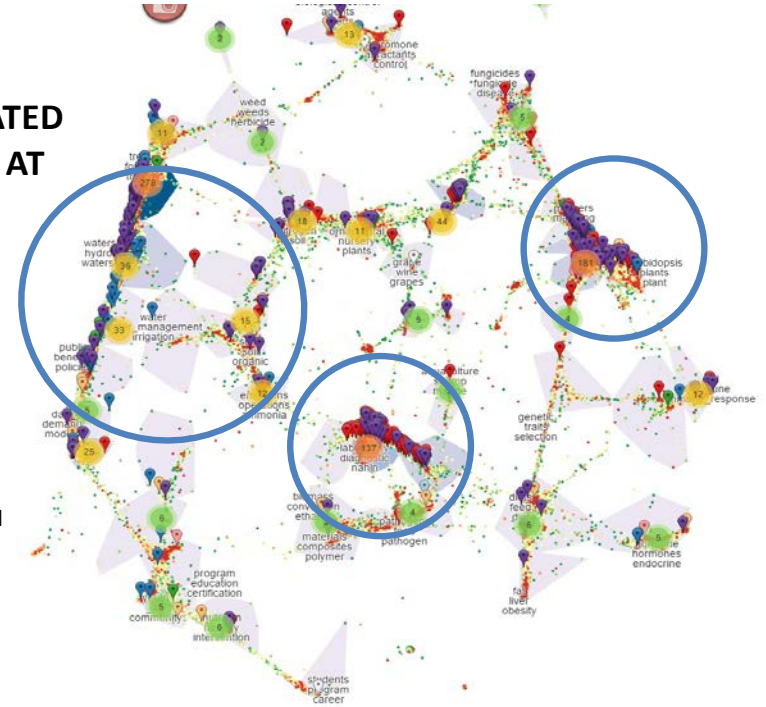

Precision Ag (technology, engineering, remote sensing, GIS)

Data Science and Analytics (research methods, data collection and analysis)

DATA-RELATED RESEARCH AT NIFA 2012-2015

Areas of increased research intensity in precision ag, data science and analytics, and "omics" related research.

2016 NIFA

Input from Data Summit and Ideas Engine

Focus on Open Data **FAIR** principles:

Findable, Accessible, Interoperable, and Re-usable

- **Community Building**
 - Standards, Ontology, and Common data resources
- **Small data to Big data in public domain**
 - Value, Incentives, Digitization, Policies
- **Infrastructure**
- **Training and Education**

NIFA's Data Opportunities

Design and Implementation

Build scalable data infrastructure and management systems

Conceptualize Open Data FAIR principles (findable, accessible, interoperable, and reusable) for data

Develop standards and best practices with other Federal and international organizations to address tradeoffs in data availability, privacy, ownership, and value

Analysis

Develop data-integration and data-quality tools to improve analytic capability

Design and implement new algorithms and methods for depicting massive data

Build integrative models to facilitate dialog and collaboration

Technologies

Connect multiscale data

Bridge real-time distributed and parallel data systems

Create new methodologies and frameworks for tracking and processing data

Identify new approaches to data archiving and sharing

Applications and Human-Technology-Data Interactions

Examine how agricultural data and computer systems are used to improve human-human, human-technology, and human-decision experiences

Integrate visualization with statistical and analytic techniques to support discovery and analysis

Engage students and professionals, teams, universities and public/private sectors

Develop decision support tools that use diverse data sources and Big Data analytics to create best value to US agriculture
